Mac Printer Setup Manual

Step-by-step guide for adding a Stevens Tech network printer using its hostname

What you will need
- A Mac connected to the Stevens Tech network
- The printer's IP address or hostname
- The correct printer driver/model

Example used in this guide
IP: 155.246.119.21
Hostname: mgtxerox01.mgnt.stevens-tech.edu
Model: Xerox PrimeLink C9275

1. Open Terminal

Open **Spotlight Search** by pressing **Command (⌘) + Space**. Type **Terminal** and press **Return** to open the Terminal application.

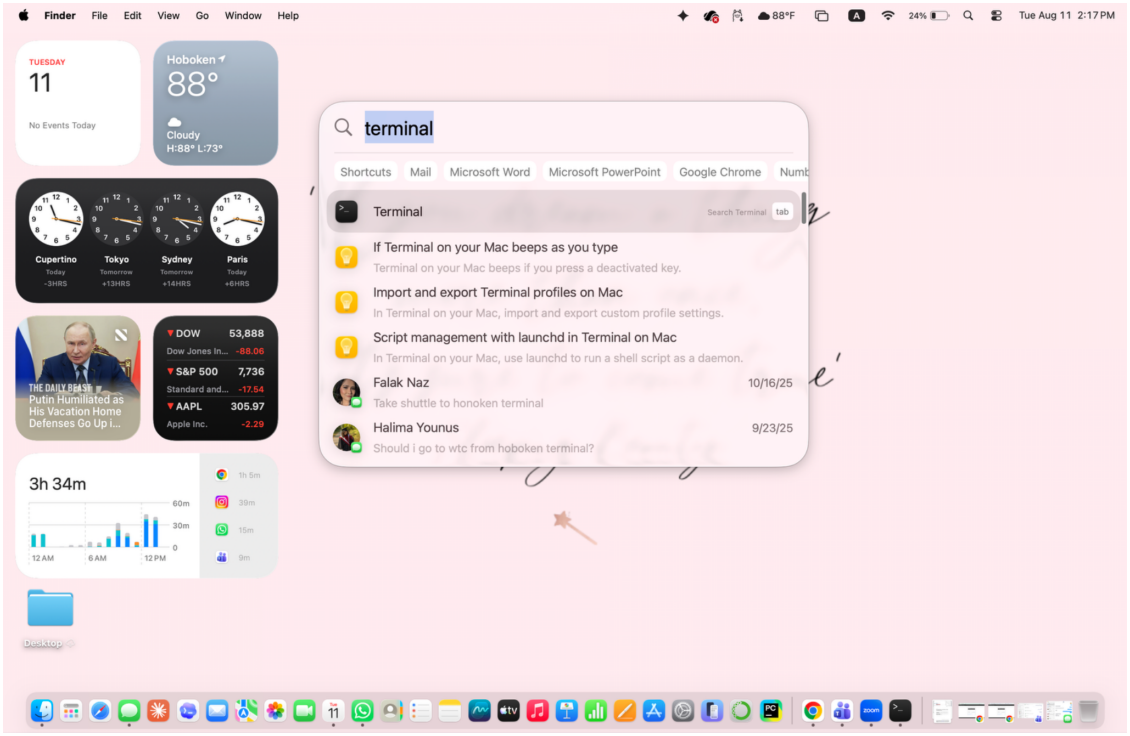

Figure 1. Search for Terminal using Spotlight.

2. Find the printer hostname

In Terminal, enter the following command, replacing the IP address with the printer's IP address:

```
nslookup 155.246.119.21
```

Press **Return**. Look for the **name =** entry in the response. In the example shown, the printer hostname is **mgtxerox01.mgnt.stevens-tech.edu**.

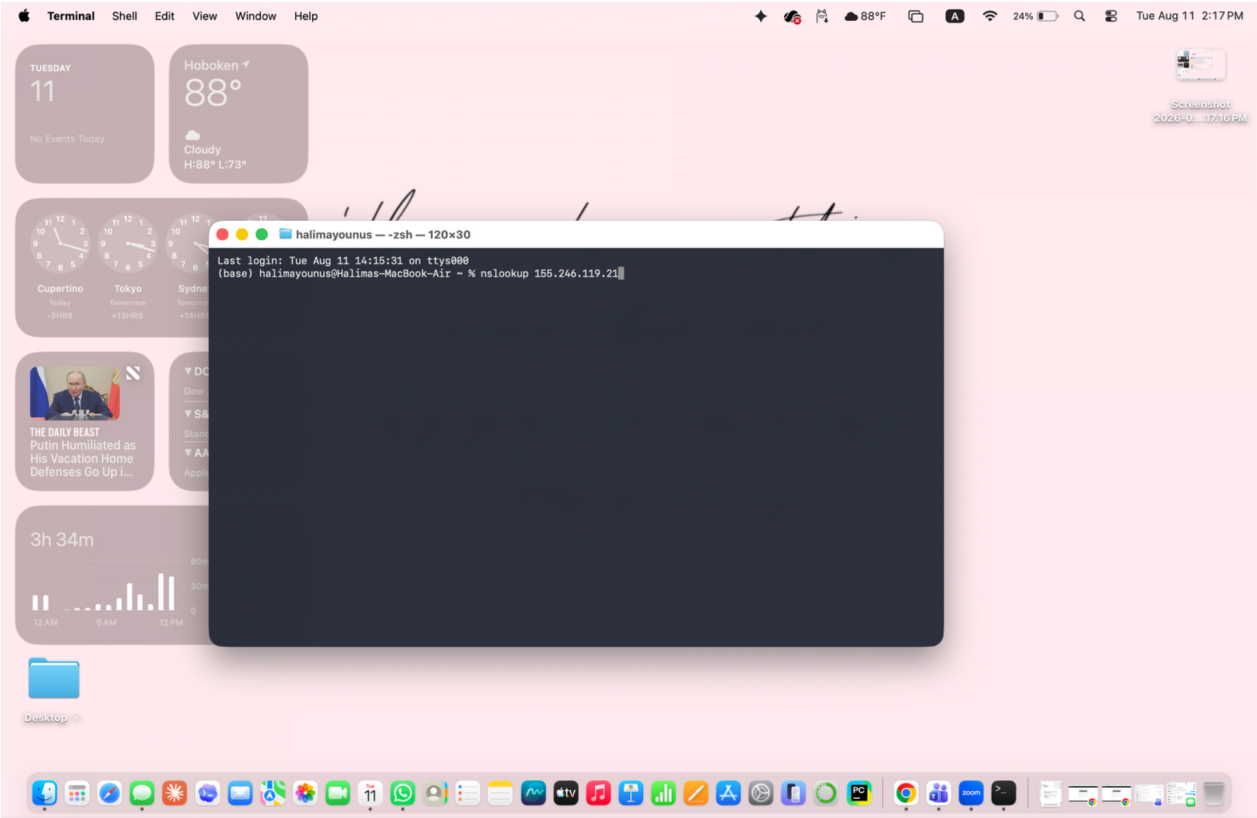

Figure 2. Use nslookup to resolve the printer IP address to a hostname.

3. Open Printers & Scanners

Open **System Settings**, then select **Printers & Scanners**. You will see the printers currently installed on the Mac.

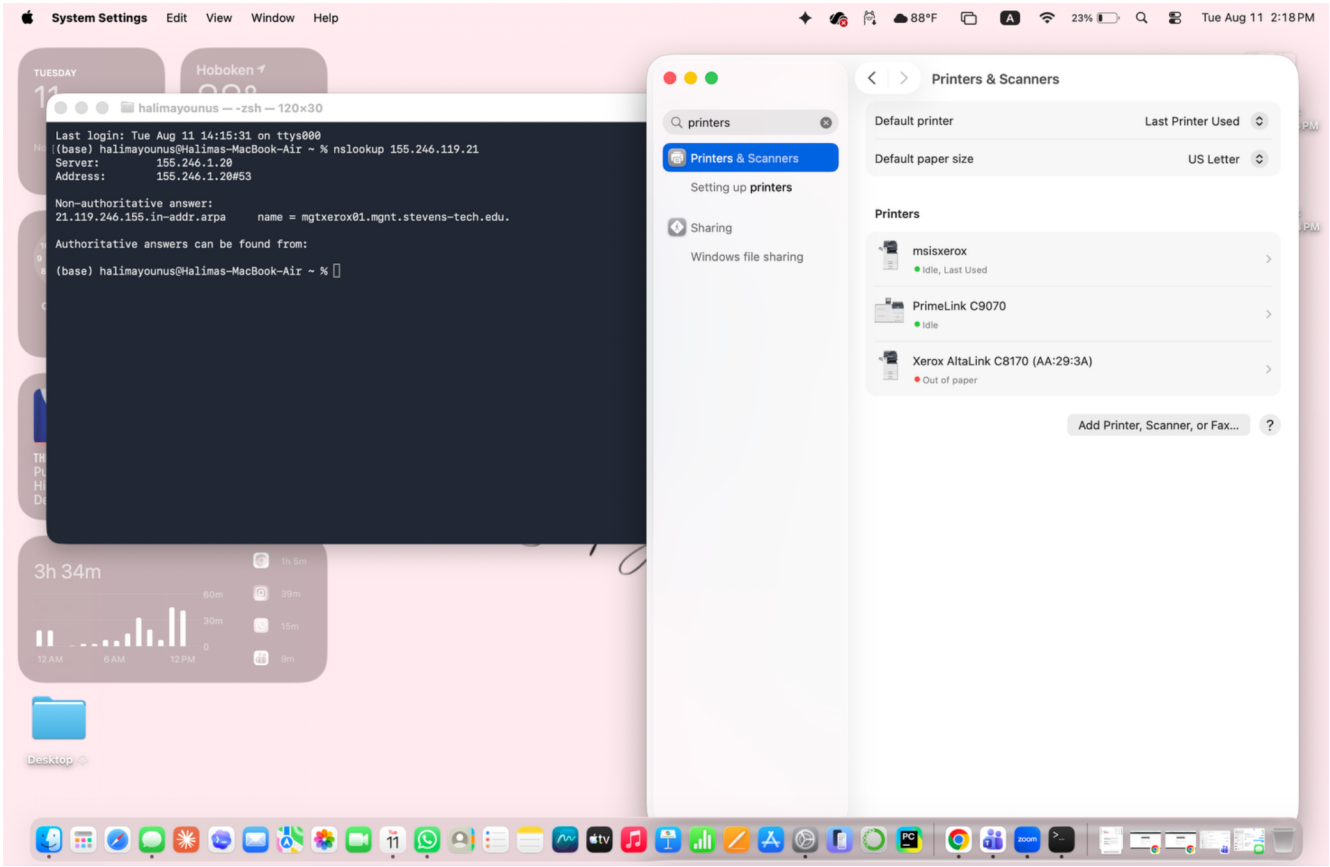

Figure 3. In System Settings, open Printers & Scanners and select Add Printer, Scanner, or Fax.

4. Add the printer by IP address

Click **Add Printer, Scanner, or Fax…**. In the Add Printer window, select the **IP** tab at the top.

Enter the printer hostname in the **Address** field. The example uses:

```
mgtxerox01.mgnt.stevens-tech.edu
```

5. Select the correct printer settings

Field	What to enter/select
Address	mgtxerox01.mgnt.stevens-tech.edu
Protocol	AirPrint
Queue	Leave blank unless your organization provides a queue name
Name	You may keep the hostname or enter a recognizable printer name
Location	Optional
Use	Xerox PrimeLink C9275

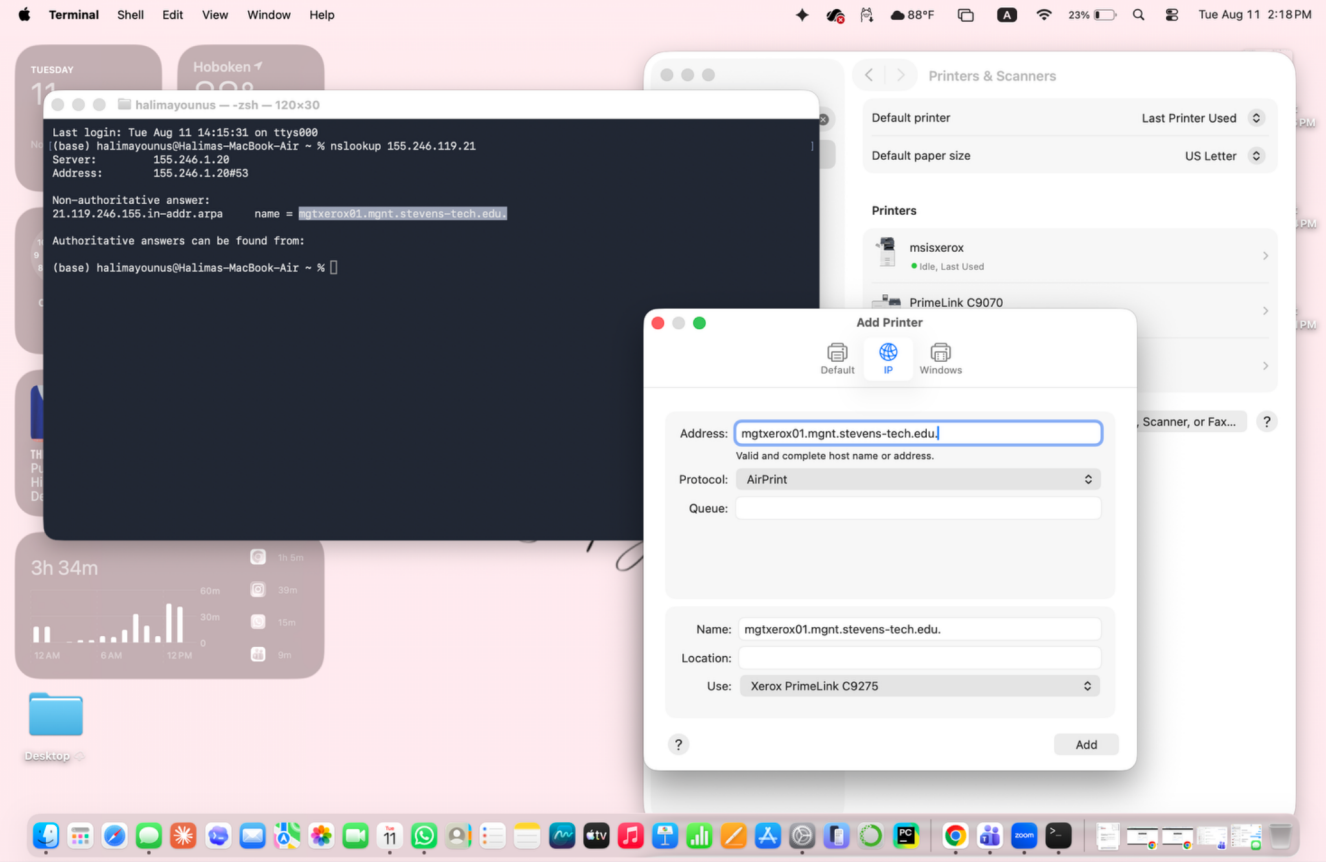

Figure 4. Enter the hostname, confirm the protocol and printer model, then click Add.

6. Finish the setup

Review the settings and click **Add**. macOS should add the printer to your list of available printers.

Recommended final check: Open the newly added printer in Printers & Scanners and print a test page or a small document. If the printer does not respond, verify that your Mac is connected to the appropriate Stevens Tech network and that the hostname/IP address is correct.

Quick Reference

1	Open Terminal from Spotlight.
2	Run nslookup with the printer IP address.
3	Copy the hostname returned by nslookup.
4	Go to System Settings → Printers & Scanners.
5	Click Add Printer, Scanner, or Fax → IP.
6	Enter the hostname and select AirPrint.
7	Select the correct Xerox printer model under Use.
8	Click Add and test the printer.
